

SVEN

meteorologist

SUNDGAARD

Thursday

September 26

6:30-7:30 p.m.

River Falls Public Library

or virtual on the River Falls Public Library Facebook Live or YouTube channel

Northern-Arctic Conditions:

Sven Sundgaard has led groups to the Arctic and Subarctic from Svalbard to Hudson Bay and conducted lectures at the Churchill Northern Studies Centre on climate conditions affecting polar bears. He's also observed about 60 of the largest predators on land in different ice conditions in different years. The polar bear in the Arctic, like the moose in Minnesota offers insights into the changing climate on iconic species. Let's explore some of the latest climate trends in polar bear country and in the North Woods.

Sven Sundgaard has been a meteorologist for more than two decades, most of which has been spent broadcasting in the Twin Cities. He's currently a meteorologist for Minnesota Public Radio, and digital news and information platform, Bring me the News.com. He also provides weather and climate content for other organizations, and is a science advisor to the Minneapolis Foundation.
